DEFECT LOG:

Title: ARSHP-B1 - Site theme not synchronized between web computer and mobile.
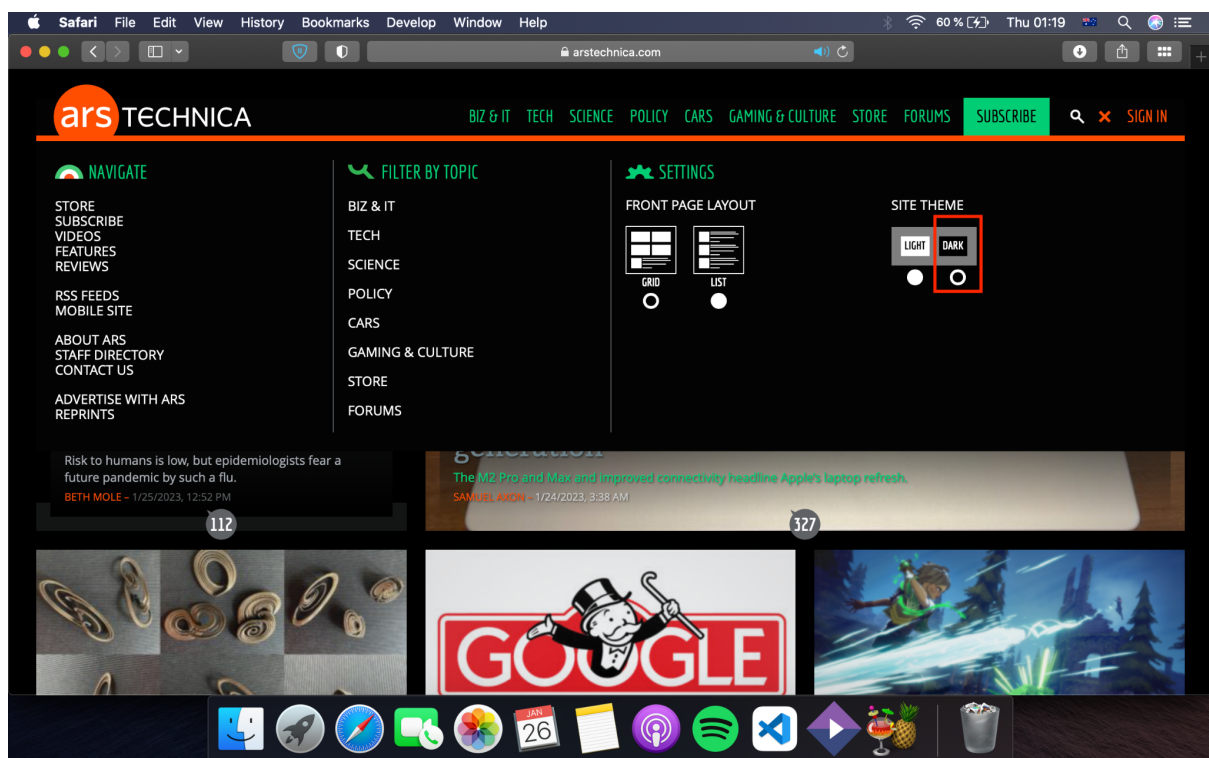

Description: On the website the user can select whether to use a light or dark theme. When a theme is selected in the desktop version, it is not synchronized with the mobile version. If the user changes the version, they must change the theme again.
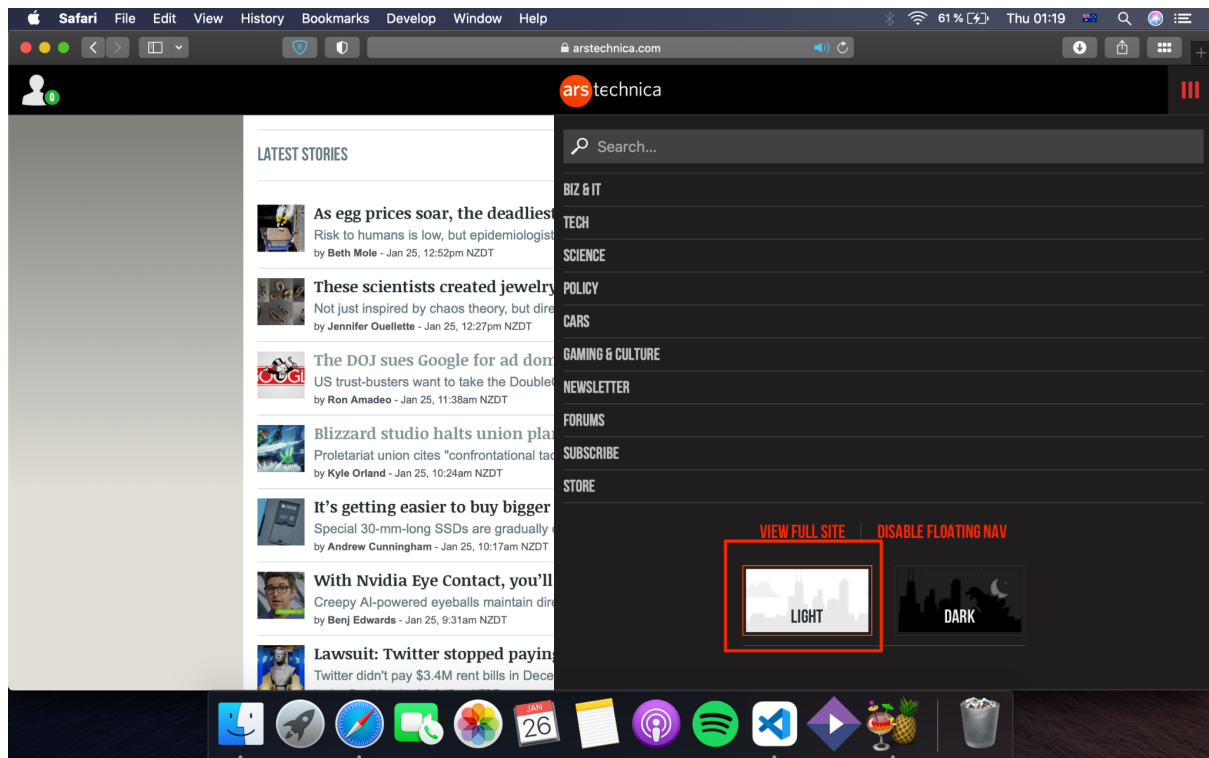

Steps:
1. Navigate to https://arstechnica.com
2. With desktop mode, open the hamburger menu and select one site theme.
3. Open the hamburger menu again and click on "Mobile Site".

Expected result: When the user selects a theme (dark or light) in the desktop version, if it changes to the mobile version, the previously selected theme continues to be displayed.

Actual result: When the user selects a theme (dark or light) in the desktop version, if it changes to the mobile version it is not synchronized, the last configuration used in the mobile version is displayed. The user needs to take additional steps if it is not the desired theme.

Severity: Low
Priority: Low

Additional Data:
Operating system: MacOS Catalina 10.15.7
